AREM is one of the largest French manufacturers of fans known throughout Europe.

AREM is especially known for its experience in making axial fans. Belt-driven and direct-driven, with short or long casings, with or without venturi, they are all designed in accordance with the specifications for the numerous applications for which they are intended.

Centrifugal fans using forwards or backwards inclined blades have just joined this range, which is one of the most extensive on the market.

DRYING – AXIALS

DESCRIPTION

We have a range from diameter 400mm to 1800mm, from a few hundred m³/h to 240,000m³/h, with motors with 2, 4 and 6 poles, 1 or 2 speeds. Our fans might also be suitable for use in geographic areas with specific electricity networks, i.e. 60 Hz.

Other motor speeds are available on request.

APPLICATION

Clean air or slightly dusty air extraction:

- Grain drying
- Wood drying
- Potato drying

FLUID TEMPERATURE

The standard operating temperatures are from -20°C to +40°C with a class F motor.

On request, fans fitted with a class H motor can operate in environments up to +130°C.

CONSTRUCTION

Our fans are made in our factory, with pre-galvanized steel as standard. At your request, to meet your specifications and constraints, we can supply:

- 304L or 316L stainless steel, with or without passivation
- Hot-dip galvanization
- Aluminium
- Surface treatment with epoxy paint

Solutions with EC motors are available in direct-drive or belt-drive. Please ask us.

ANCILLARIES

In line with your requirements, we have safety guards, support feet, rigid coupling flanges, outlet backdraught dampers, on-off switch connectors, etc. to simplify your installation. See **ANCILLARIES tab** for more information.

OPTION

We can wire motors, switch connectors, make special productions, etc. and study your requirements to meet your specifications and constraints.

Reminder: All conventional and normative elements are presented in the **STANDARDS-RULES-CONVENTIONS** tab. All ancillaries are presented in the **ANCILLARIES** tab at the end of the catalog. Please contact the sales team for your specific requirements.

AXUS RANGE – OUR DRYING SOLUTIONS

Standard range

Our fans are made in France at our factory in Saint-Brisson sur Loire and are designed for drying or to operate at high temperatures up to +130°C.

The use of specific motors (class H or non-classified motors) designed for particular atmospheres, including continually high temperatures, allows our range of axial fans to meet high flow rate requirements with variable air speeds and suitable for different products: wood, fruits and vegetables, cereals, bricks and terracotta tiles, etc.

Our impellers are defined and made to order. Optimizing the blades' angle and quantity provides the best energy efficiency and the most suitable power for your need. The glass reinforced polyamide impellers provide a solution that combines efficiency, robustness and lightness, including for temperatures up to 120°C, and our aluminium solutions will meet your requirements for more extreme temperatures.

Using mainly foot-mounted motors (B3) facilitates use in many configurations and makes any modification or maintenance requirements easy to satisfy.

Depending on the products to treat, you can opt for our casings and other metal parts for an aluminium, combined aluminium-stainless steel, 304L or 316L stainless steel, or hot-dip galvanized steel construction. A paint coating with particular specifications (thickness, weather class, etc.) can be made upon request.

Thanks to our ranges of reversible impellers, we can cover the requirements for flow reversal integrated into your processes (closed loop treatments or switching from an extraction mode to an air supply mode).

Our range of long or short casings, with or without inlet bellmouth, enables us to provide different mounting configurations and different flow types (vertical, horizontal) with the addition of relevant ancillaries.

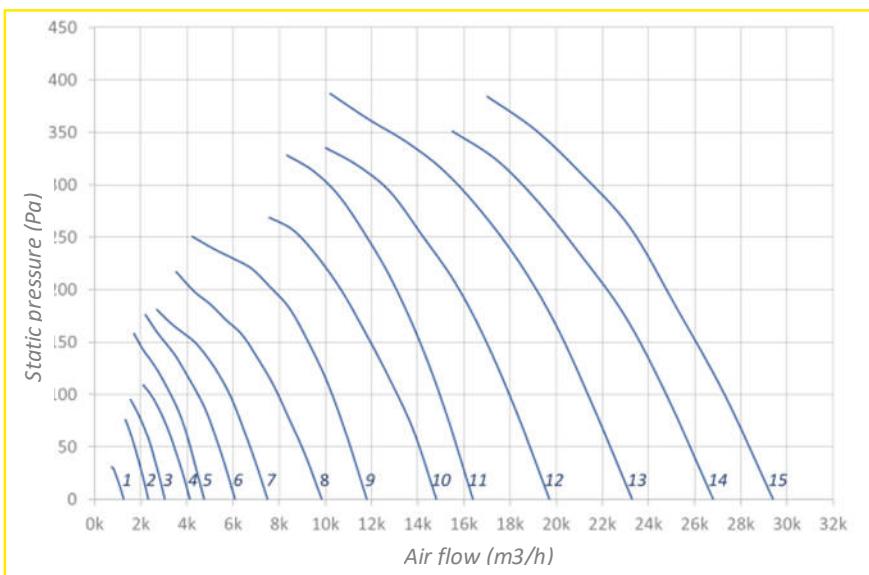

To achieve the most competitive lead time for our customers, we keep the largest possible range of motor power in stock and have access to multiple supply sources.

AXUS EC – ELECTRONICALLY COMMUTATED

Integrated and External Solutions

If the fans are used daily for many hours at a time or require variability in their use, we have a range of axial fans fitted with electronically commutated motors. By means of different control modes, from potentiometer to Modbus, it is possible to adjust speeds, from the simplest to the most complicated and thus reduce the energy consumption of your installations. These fans are fitted with high-efficiency motors (from IE4 to IE5) and retain very high-performance levels over their entire operating range.

Characteristics:

- Diameter from 400 to 1250mm
- EC solutions with integrated or external drive
- Electronic management and communication via ModBus RS485
- Motor speed variation with 0-10V input signal
- Fast connection terminal blocks

Integrated EC

- ✓ Drive integrated in the motor
- ✓ Off / On: contact 1 or 0
- ✓ Speed feedback signal: 3 pulses/rev
- ✓ Motor fault code via Modbus
- ✓ Modbus connection: terminal blocks
- ✓ Temperature: from -20 to 45°C

External EC

- ✓ Drive attached to the casing
- ✓ On/Off: detection 1 Volt
- ✓ Speed feedback signal: 1 pulse/rev
- ✓ Motor fault code via Modbus
- ✓ Modbus connection: terminal blocks or RJ12 plug
- ✓ Temperature: from -40 to 45°C
- ✓ 2x digital inputs: terminal blocks
 - On / Off
 - Default reset
 - Direction of rotation if use of reversible impeller
 - Booster mode (full motor speed)
- ✓ 1x digital output: terminal blocks
 - Tachymeter
 - In operation LED indicator
 - Fault LED indicator

Factory settings:

- Motor with maximum speed 1500 rpm; we limit the minimum speed to 500 rpm.
- Motor with maximum speed 3000 rpm; we limit the minimum speed to 1000 rpm.
- In the external EC version, the inputs and outputs are not configured by default.

AXUS EC RANGE

Standard range

Our AXUS EC range is made in pre-galvanized steel as standard. Options in 304L or 316L stainless steel, hot-dip galvanized steel and paint coating are available on request. The range is available for single-phase and triple-phase networks for the 50/60Hz frequencies in accordance with the table below:

Diameter mm	Integrated EC Volt. 50/60Hz	External EC Volt. 50/60Hz
400	✓ (1x 230/280V)	✗
450	✓ (1x 230/280V)	✗
500	✓ (1x 230/280V)	✗
560	✓ (1x 230/280V)	✓ (1x 230/280V)
630	✓ (1x 230/280V)	✓ (3x 400/440V)
710	✓ (1x 230/280V)	✓ (3x 400/440V)
800	✓ (1x 230/280V)	✓ (3x 400/440V)
900	✗	✓ (3x 400/440V)
1000	✗	✓ (3x 400/440V)
1120	✗	✓ (3x 400/440V)
1250	✗	✓ (3x 400/440V)

Different solutions are proposed to meet specific requests. Based on the standard range, we can build tailor-made products to satisfy your specific applications:

- Solution with reversible impeller, in insulated plenum box, etc.
- 480V/60Hz network, corrosive environment, etc.
- Operation at particular speeds, configuration of inputs and outputs according to demand, etc.
- Specific mounting, external drive in a technical room, etc.
- Operation at temperatures from +50°C to 130°C

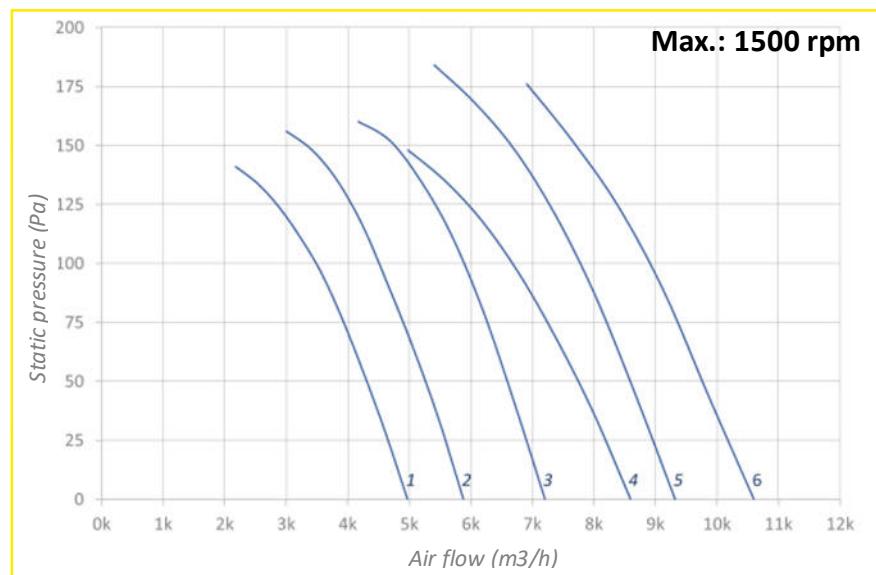

Example of specific mounting: Belt-driven axial fan

- ✓ EC motor with external drive
- ✓ Motor offset outside the air flow
- ✓ 316L finish
- ✓ Control in a technical room

AXUS EC INTEGRATED: Max. speed 1500 and 3000 rpm

Common operating range

Curve No.	Ø mm	Power kW	Current A

room, etc.

EX – BELT DRIVE

Belt-drive mounting

To meet specific needs where the motor has to be outside the air flow, we propose our range of belt-driven fans which, by using our impeller range, can cover a wide scope of performances.

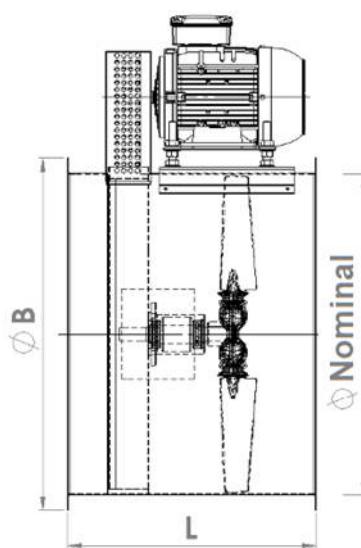

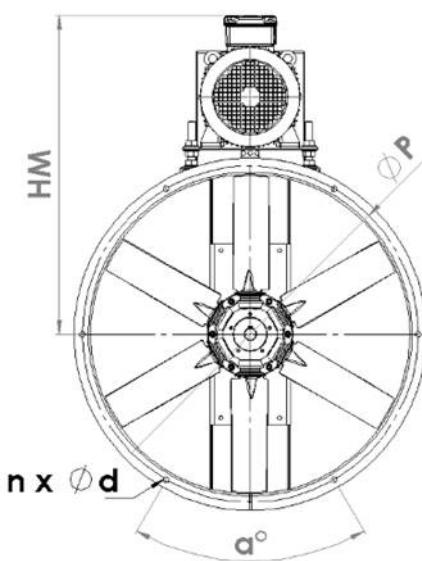

The combination of the casing diameter, the installed power and the drive ratios will be defined depending on your different constraints, available space, power, sound level, etc.

Standard construction:

- Housing in Z275 pre-galvanized steel
- Pre-selection of bearings and standard belt -20° to +80°C

Option:

- Bearing for high temperatures up to 130°C
- Sealed, greased for life or bearings with grease fittings
- Hot-dip stainless steel (304L, 306L)
- Epoxy paint

Nominal Ø mm	B mm	n -	α °	d mm	P mm	L mm	HM mm	Weight* kg

Note:

*Weights are provided for information only and include the motor weights of the maximum power (without ancillaries).

For diameters greater than 1250mm, contact us.

DRYING – CENTRIFUGALS

DESCRIPTION

We have a range from diameter 250mm to 1400mm, from a few hundred m³/h to 250,000m³/h, with motors with 2, 4 and 6 poles, 1 or 2 speeds. Our fans might also be suitable for use in geographic areas with specific electricity networks, i.e. 60 Hz.

Other motor speeds are available on request.

APPLICATION

Clean air or slightly dusty air extraction:

- Grain drying
- Wood drying
- Potato drying

FLUID TEMPERATURE

The standard operating temperatures are from -20°C to +40°C with a class F motor.

On request, fans fitted with a class H motor can operate in environments up to +130°C.

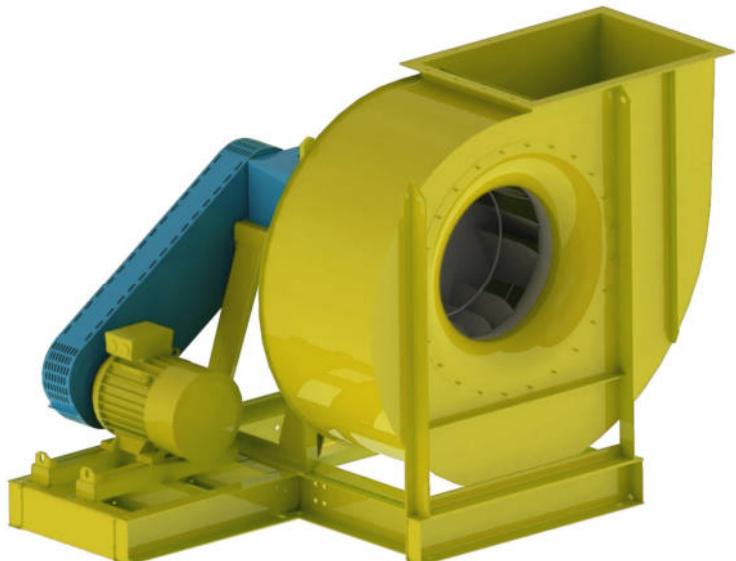

CONSTRUCTION

Our fans are made in our factory, with Fe360 steel sheet as standard. At your request, to meet your specifications and constraints, we can supply:

- 304L or 316L stainless steel, with or without passivation
- Hot-dip galvanization
- Surface treatment with epoxy paint

Solutions with EC motors are available in direct-drive or belt-drive. Please ask us.

- ✓ Single-inlet: RL - RM
- ✓ Electronically commutated

ANCILLARIES

In line with your requirements, we have safety guards, support feet, rigid coupling flanges, outlet backdraught dampers, on-off switch connectors, etc., to simplify your installation. See **ANCILLARIES tab** for more information.

OPTION

We can wire motors, switch connectors, make special productions, etc. and study your requirements to meet your specifications and constraints.

Reminder: All conventional and normative elements are presented in the **STANDARDS-RULES-CONVENTIONS** tab. All ancillaries are presented in the **ANCILLARIES** tab at the end of the catalog. Please contact the sales team for your specific requirements.

RL / RM SERIE – BACKWARD CURVED BLADES

Standard range

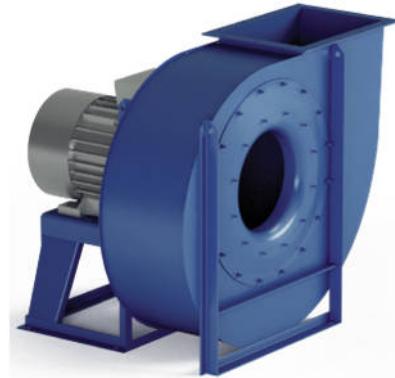

RL

Low and medium pressure
Welded housing
Possible fan rotation (every 45° with motor on support stand or full with a flange motor)
Clean air or slightly dusty air inlet

RM

Medium pressure
Stapled housing (welding possible)
Possible fan rotation (every 45° with motor on support stand or full with a flange motor)
Ventilation for grain silos
Suction of dry and dusty air, saw dust but no filamentary material.

Standard construction:

- Housing in painted Fe360 steel
- Statically and dynamically balanced impeller in accordance with ISO 1940 grade G6.3
- Multi-positions RD or LG from diameter 220 to 630mm (see conventions for centrifugal fans)
- For large diameters with a welded construction, the orientation must be determined when ordering.
- Foot-mounted motor (B3) for flexibility in terms of configurations and installations.
- Available in flange-mounting (B5)
- Operating temperature -10°C to +60°C

Option:

- Reinforced construction for high-temperature operation (the impeller speed will be downgraded)
- 304L and 316L stainless steel
- Acoustic insulation
- Mobile mounting or specific adaptation

OPERATION AT HIGH TEMPERATURE

Speed adjustment

- Impellers and inlet bellmouth in special steels
- Adjustment of the impeller's speeds

Below are the maximum speeds (rpm) for the RL and RM series depending on the impeller class used. Operation at high temperature requires a reduction in the impeller speeds by multiplying the maximum speed by the adjustment percentage (adjustment%):

Adjustment %	Temperature °C		
	60	to	100
10%	100	to	150
16%	150	to	200
23%	200	to	250
30%	250	to	300
37%	300	to	350
45%	350	to	400
54%	400	to	450
64%	450	to	500

Notes:

(*) HA is the motor frame size.

(**) Due to multiple sourcing of motors, there may be weight differences (motor in cast iron or aluminium, single-speed or dual-speed, etc.)

(***) A is variable depending on the motorization.

For diameters greater than 1400mm, contact us.

RL / RM EC SERIE – ELECTRONICALLY COMMUTATED

Integrated and External EC

For RL and RM models, a version with EC motorization is available. The combination of electronic management and a permanent magnet motor promotes energy savings by reducing electricity consumption. The acoustic level is also optimized for surrounding comfort.

AREM EC centrifugal fans are designed for simple use (integrated EC). They are also available in expert mode for complete management with programmable controllers via Modbus communication and protocols (external EC).

Characteristics:

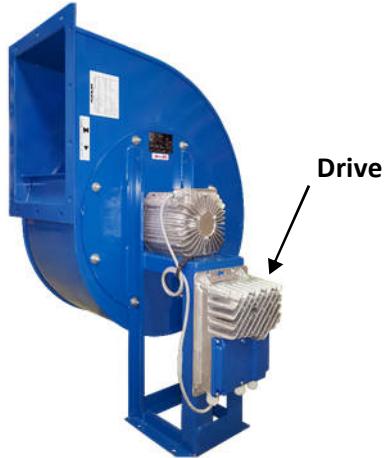

- Diameter from 250 to 630mm
- EC solutions with integrated or external drive
- Electronic management and communication via ModBus RS485
- Motor speed variation with 0-10V input signal
- Fast connection terminal blocks

Integrated EC

- ✓ Drive integrated in the motor
- ✓ Off / On: contact 1 or 0
- ✓ Speed feedback signal: 3 pulses/rev
- ✓ Motor fault code via Modbus
- ✓ Modbus connection: terminal blocks
- ✓ Temperature: from -20 to 45°C

External EC

- ✓ Drive attached to the casing
- ✓ On / Off: 1V input signal detection
- ✓ Speed feedback signal: 1 pulse/rev
- ✓ Motor fault code via Modbus
- ✓ Modbus connection: terminal blocks or RJ12 plug
- ✓ Temperature: from -40 to 45°C
- ✓ 2x digital inputs: terminal blocks
 - On / Off
 - Default reset
 - Booster mode (full motor speed)
- ✓ 1x digital output: terminal blocks
 - Tachymeter
 - In operation LED indicator
 - Fault LED indicator

Factory settings:

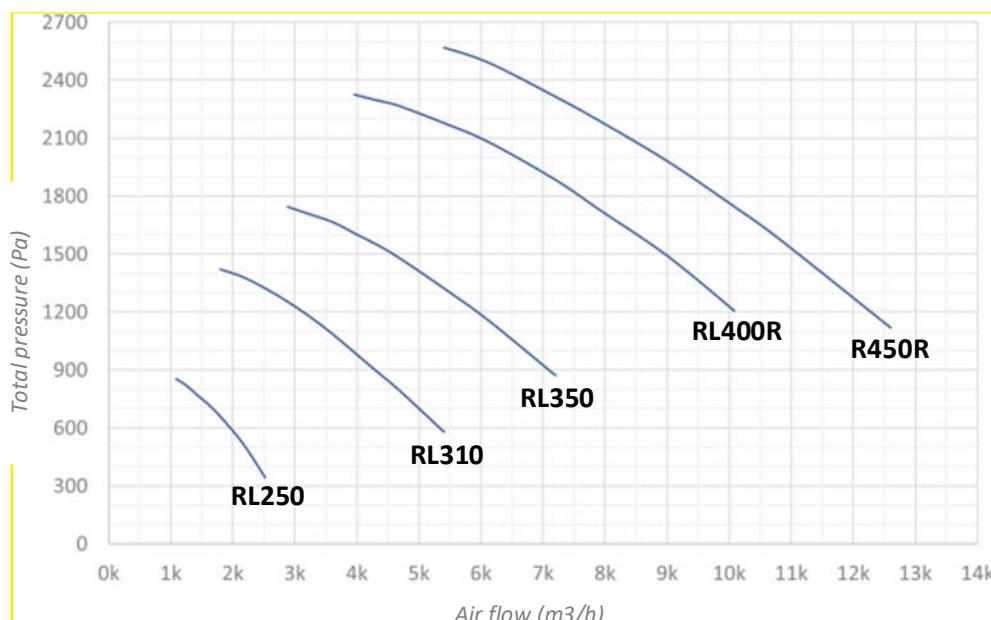

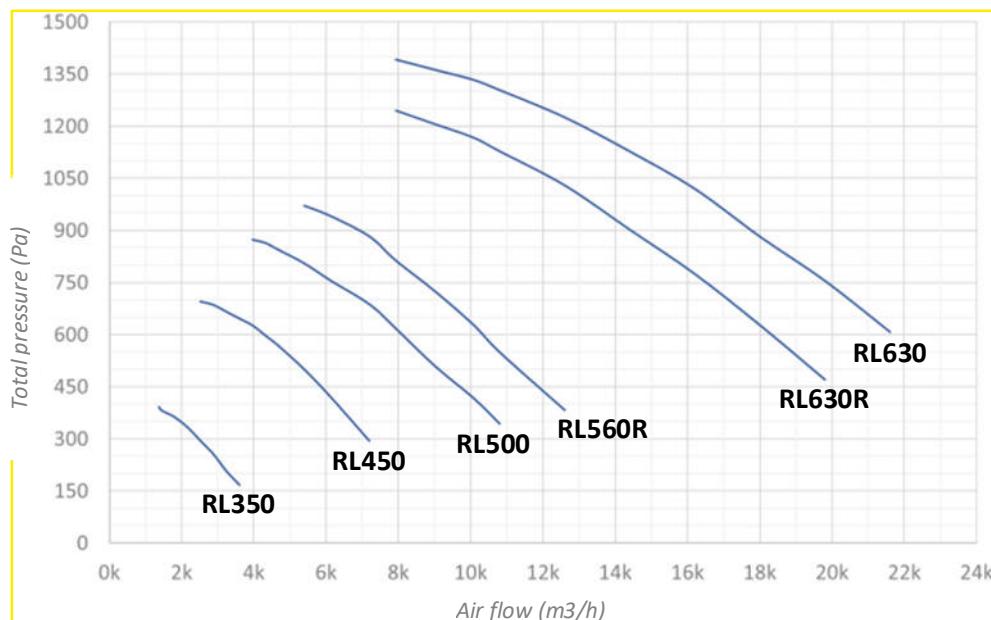

- In the external EC version, the inputs and outputs are not configured by default.

Different solutions are proposed to meet specific requests. Based on the standard range, we can build tailor-made products to satisfy your specific applications.

RL EC PERFORMANCES

Common operating range

RM...	HA mm	Inst. P kW	Current A	Voltage V (50/60Hz)	Motor V. min. rpm	Motor V. max. rpm
